                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc used to treat disorders associated with decreased expression by crectifying mutations or deletions in a patient's genome that affect the cc activity of TCAPs by expressing inactive proteins or to supplement the CC patients own production of them. Additionally, (II) may be used to CC produce the TCAP proteins, by inserting the nucleic acids into a host CC cell culturing the cell to express the protein. (II) and its CC complementary sequences may also be used as DNA probes in diagnostic CC polymerase chain reaction (PCR) and hybridisation assays to detect and CC quantitate the presence of similar nucleic acids in samples, and CC therefore which patients may be in need of restorative therapy. (I) may CC and in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies against TCAPs CC and in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies may also be used to down regulate CC cas diagnostic agents for detecting the presence of TCAPs in samples and antagnostic agents for detecting the presence of TCAPs in samples CC (e.g. by enzyme linked immunosorbant assay (ELISA)). AAIZ8460 to AAIZ9512 CC qiven in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

```
CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary cc to the complementary strand of a polynucleotide which comprises one of coligonucleotide comprises at least 15 nucleotides; or (b) a combination complementary strand of a polynucleotides; or (b) a combination complementary strand of a polynucleotide which comprises a 5 end cc sequence and an oligonucleotide comprising a sequence complementary to the cc sequence and an oligonucleotide which comprises a 5 end cc polynucleotide which comprises a 1 end sequence, where the cliponucleotide which comprises and the combination of cc the 5'-end sequence', end sequence omplementary to a coligonucleotide comprises at least 15 nucleotides and the combination of cc the specification. The primer sets can be used in antisense therapy and cc particularly full-length cDNAs. The primers are also useful for the cc particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the compass easily without any specialised methods. AAH03166 to AAH13632 and CC AAH13633 to AAH13642 represent human cDNA sequences; AAB92446 to CC CAB95893 represent human amino acid sequences; AAB92446 to AAH13632 crepresent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

   AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antiqens. The colon cancer antiqens have cytostatic activity and can be used in gene
                                                                                                                                                                                                                                                                                                29-SEP-1999;

N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1517 aaagaagatatgcttcttaaacaaggtca 1545
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAC59530
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    comprising the sequences given in AAZ12532 to AAZ17779. Also described is a method of detecting differentially expressed genes correlated with the Cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell country of the S248 polynucleotide sequences given in AAZ12532 to AAZ1779. The CC polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, can be used for raising antibodies for experimental, diagnostic and cc mapping, tissue typing or profiling, forensics, genetic analysis and cc detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an cencoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to construct predisposition or susceptibility to a disease such as cancer). The polynucleotides of the invention are especially used in the cancer. The polynucleotides can also be used to screen for cand lung cancer. The polynucleotides can also be used to screen for each period analogues and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                  Novel human secreted proteins useful for diagnosis, prevention and treatment of disorders including neurological, cell proliferative, cardiovascular, autoimmune and inflammatory disorders and microbial

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to the isolation of genes AAC59507-C59556 encoding CC 50 human secreted proteins by linking to the gene for the human cc generate fusion proteins by linking to the gene for the human cc generate fusion proteins by linking to the gene for the human cc immunoglobulin G Fc portion (AAC59498) for increasing the stability of the fusion protein as compared to the human protein only. The genes and cc proteins are useful for preventing, ameliorating or treating medical cc conditions, e.g. by protein or gene therapy. The genes are isolated cc from a range of human tissues disclosed in the specification. The cnicleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast cand ovarian cancer, and other cancers of the adrenal gland, bone, bone cc marrow, breast, gastrointestinal tract, liver, lung, or urogenital; cc marrow, breast, gastrointestinal tract, liver, lung, or urogenital; cc marrow, breast, gastrointestinal tract, liver, lung, or urogenital; cc disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) cepilepsy; and (f) infectious diseases a.g. cerebral anoxia and cepilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query

The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OREX-associated disorder. The nucleic acids can be used to express OREX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus; systemic lupus hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemis, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel nucleic acids and peptides derived from open reading useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. This sequence represents a nucleic acid molecule which encodes a CC secreted human protein. The gene number is given in the descriptor line. CC The gene can be used to generate fusion proteins by linking to the gene CC to a human immunoglobulin FC portion (e.g. AAX84924) for increasing the CC stability of the fused protein as compared to the human protein only. CC The invention relates to 125 novel genes and their fragments (nucleic The invention relates to 125 novel genes and their fragments (nucleic Which are useful for preventing, treating or ameliorating medical CC conditions e.g. by protein or gene therapy. Also, pathological CC conditions can be diagnosed by determining the amount of the new CC conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 125 CC polynucleotides, based on which tissues they are most highly expressed in CC conditions can be described uses are described for each of the 125 CC polynucleotides, based on which tissues they are most highly expressed in CC conditions can be described uses).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The introduction of an expression cassette containing an exogenous Frkl (fructokinase) sequence, is used to modify sweetness and promote starch biosynthesis in transgenic plants, particularly tomato. Expression of FrkI in sense or antisense orientation inhibits conversion of fructose to its 6-phosphate, increasing sweetness. Overexpression of fructose trouble fruction in the sense of the sens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New fructokinase gene from tomato - useful for, e.g. inhibiting fructokinase activity for increasing sweetness or stimulating s biosynthesis in plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1906 BP; 515
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Page 28-32; 51pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New transgenic non-human animal (preferably mice) are described which comprise a nucleotide construct capable of altered expression of stretch activated cation channel, a macromolecule of the alpha subunit of the epithelial sodium channel (alpha-ENAC). The genetically altered mice can be used for investigations of the role of stretch-activated cation channels in bone in vivo, and for the development of pharmacological agents to activate these cation channels, especially useful for bone metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Transgenic non-human animal having altered expression stretch-activated cation channel alpha-ENAC useful for agents to activate these channels for bone anabolism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 3; Page 14-16; 19pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            25-APR-2000;

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              C.N.S disorders, Note: The sequence data for this patent did not form part

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The invention provides serine/threonine phosphatase family polypeptides and polynucleotides encoding them. The polypeptides, polynucleotides and combinant methodology. The polypeptides, polynucleotides and combinance are useful for disgnosis, prognosis, prevention and treatment combination of neurodegenerative disorders, infectious diseases, autoimmune combination of neurodegenerative disorders, described and isorders, cardiovascular disorders, cerebrovascular disorders, repaid disorders, cerebrovascular combination and treatment combination of the diseases that can be treated). They are also concentrations, to accelerate recovery of immunosuppressive agents, stimulator componentrations, to accelerate recovery of immunocompromised individuals, concentrations, to accelerate recovery of immunocompromised individuals, concentration in pathologies as an agent to increase serum immunoglobulin concentration in pathologies e.g. AIDS, and/or common variable immuno deficiency. The polypeptides and polynucleotides are useful to prevent concentration of hemopoletic cells and bone marrow calls, for components of collections and/or remanalian metabolism to change a mammal's mental or physical state, and as food additive or preservative. The present color and sequence represents a human serine/threonine phosphatase encoding cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC (AmP). This protein is used to produce recombinant AmP and can be used CC (AmP). This protein is used to produce recombinant AmP and can be used CC for gene therapy for treating AmP-deficiency conditions. Its fragments CC are used as primers and probes to identify patients with homozygous and theterozygous AmP deficiency, including prenatal diagnosis (patients CC defective in AmP are at risk of developing angloedema if treated with CC anglotensin-converting enzyme inhibitors), also as antisense inhibitors CC in cases of excessive AmP expression. The product of the invention is CC also used to identify AmP-expressing sequences in other animals and to generate transgenic animals, and comparisons of genomic sequences are CC used to detect mutations. AmP inhibitors are potentially useful as CC anthypertensive agents and to prevent or treat arterial (re)stenosis CC anthypertensive agents and to prevent or treat arterial (re)stenosis CC inido bonds, can be used to degrade for a minus protein feeds to free CC amino acids, to degrade proteinaceous wastes, as additives in enzyme CC inido acids, to degrade proteinaceous wastes, as additives in enzyme CC inido acids, to treat malabsorption syndrome and for studying its Diological role. Antibodies against AmP are used in immunohistochemical CC methods to study AmP distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The present sequence represents the HC-contig derived from normal human chromosome 10, 10q25, 2 region. This region can be naturally mutated to CC produce an unusual chromosomal marker referred to as mardel(10). The CC mardel(10) marker is mitotically stable and contains a functional CC neocentromere at a location regarded as non-centromeric. This CC neocentromere maps to q25,2 on chromosome 10. The specification describes CC nucleit acid sequences derived from a eukaryotic chromosome, including a neocentromere or its functional derivative or hybrid, that are able, in a compatible cell, of replicating, acting as extra-chromosomal element CC and segregating during cell division. The sequences can be used to creplicable, segregating nucleic acid that confers a specific phenotype CC construct artificial chromosomes for use in gene therapy comprising a CC replicable, segregating nucleic acid that confers a specific phenotype CC carry large amounts of DNA (e.g. therapeutic genes), and, being CC extra-chromosomal, they are not mutagenic. The artificial chromosomes CC are also useful for generation of transgenic plants and animals, in CC expression of cytokines, receptors and growth factors, or to increase the copy number of a gene in a cell. The constructs may also be constructs and structural analysis of chromosomes.

CC AAT69845 and AAT69846 are address probes for mutant and wild type CC ornithine transcarbamylase, respectively. These sequences were used to test the method of the invention. The method of the invention is for CC amplifying a nucleic acid molecule. It comprises mixing at least one CC rolling circle (ATC) which comprises a single stranded circular DNA CC target circle (ATC) which comprises a single stranded circular DNA CC target circle (ATC) which comprises a single stranded circular DNA CC the CC polymerase and incubating such that a tradem sequence DNA is formed. The CC method, designated unimolecular segment amplification, is used for CC detecting specific sequences with high speed and sensitivity. It is CC especially useful for detecting mutations in genes where numerous and coultiple genes are involved. The method is isothermal and provides a simple, consistent and quantitative detection of multiple target CC molecules as the amplification occurs not in cycles but as a single CC amplification step is linear and is catalysed by a highly processive

Nucleic acids differentially expressed useful for diagnosis or therapy of tumo tumors and for tumor and not for screening normal cells, ing active

Claim 6; Page 490; 579pp; German.

This invention describes a nucleic acid (I) with differential expression between tumour and normal cells and which has cytostatic activity. (I) work as modulators of Ras activity by inducing expression of tumour suppressor genes. (I), and polypeptides encoded by them, are useful as targets for diagnosis or therapy and in screening to determine the

The polypeptides can be used to generate antibodies or anti-idiotypic antibodies for passive immuno therapy. A portion of the polynucleotides encoding the polypeptides can be used as a probe or to modulate the expression of the polypeptides. AAA06241 to AAA06691 and AAY82000 to AAX82020 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes isolated polypeptides, comprising an immunogenic portion of a prostate tumour protein (PTP). The polypeptides and polynucleotides encoding them have cytostatic activity and can be used in vaccines and in gene therapy. The polypeptides and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; prostate cancer; prostate-specific; diagnosis; vaccine; cytostatic; gene therapy; metastasis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 301
                        The present invention describes polynucleotide sequences (I) which encode prostate-specific proteins (II). (I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I), (II) antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and the antibodies are also used in the detection of cancer in a patient. The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              04-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAH93587

They can indicate the level of metastasis as well as the prostate volume. AAH93357 to AAH93944 and AAW01115 to AAW01318 represent polynucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes an isolated polypeptide (PI) comprising at least an immunogenic portion of a prostate-specific protein, or its variant. Also described are polynucleotides (NI) encoding (PI). (PI) and (NI) have cytostatic activity and can be used in vaccine production. The polypeptides, nucleic acids and antibodies from the present invention are useful in the diagnosis and therapy of prostate cancer. Prostate specific genes P704P, P712P, P775P and B305D are located in a ganomic region on chromosome 22q11.2 known as the Cat Eye Syndrome region. Prostate specific antigen (PSA) P501S was located on chromosome 1. AAH84671 to AAH85143 and AAG99000 to AAG99077 represent

                                                                                                                                                                                                                                              The present invention describes an isolated polypeptide (I) comprising at least an immunogenic portion of a prostate tumour antigen protein or its variant. (I) have cytostatic activity and can be used in vaccine production. (I), prostate tumour antigen polynucleotides, an antigen presenting cell (APC e.g. a dendritic cell) that expresses (I), and a pharmaceutical composition containing (I) are useful for inhibiting the development of cancer in a patient. Antibodies specific for prostate specific proteins and oligonucleotides that hybridise to a polynucleotide that encodes a prostate specific protein are useful for detecting the presence or absence of a cancer or monitoring the progression the progression of a cancer, especially prostate cancer. AntiO2422 to AAH2872, AAH74798 to AAB74821 and AAB74830 are sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   4709

The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them sultable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haemostatic activiny, inhibin activity, chemotactic/chemokinetic activity, anemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      e.g. human blood, kidney, foetal lung, placenta, testes, ovary, pituitary, retina and colon cDNA libraries

The present invention provides a number of coding sequences and proteins, the over-expression of which is associated with ovarian carcinoma/cancer. These can be used in the diagnosis, treatment and prevention of ovarian cancer, optionally by gene therapy or in the form of a vaccine. The

                                                                                                                                                                                                                                            The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing an alcroarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                          Sequence 577
                                                                                                                                                                                                                                                                                                                                                             Claim 25;
                                                                                                                                                                                                                                                                                                                                                                                             analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Probe; microarray; human; placenta; antenatal diagnosis; genetic disorder; ss.

                                                                                                                                                                                                                                                                                                      CC The specification describes OLD-35, OLD-64, OLD-137, OLD-139, OLD-142 CC and OLD-175 proteins. The OLD nucleic acids are useful for reversing CC the cancerous phenotype of a cancer cell, determining if a cell is CC senescent, growth arrested or terminally differentiated. They are also CC useful for reversing the aging process in a cell and degrading specific CC RNAs in a cell. The genes may also be used as a diagnostic indicator of CC and as a marker to identify drugs or small molecules that will induce CC and as a marker to identify drugs or small molecules that will induce CC interferons. The combination of Old-35 with other interacting proteins is useful for targeting the differentiation of specific cells. Old-35 can be used to selectively stabilize specific mRNAs containing adenoviral phenotype of a cancer cell and inhibiting the growth of a cancer cell. They are also useful for regenerating tissue. The present sequence

The sequence spans from -860 to +29 of the albumin gene (Ha5) and is used to direct high level seed-specific expression of a heterologous gene, such as lipid metabolism genes, e.g. delta-6 desaturase (AAV34398), in transgenic plants. The 3' BamHI restriction enzyme recognition and cleavage site (GGATCC) was added during the PCR amplification procedure.

The coding sequences were isolated from a number of different clones, leading to the identification of a number of different protein sequences. The protein is involved in the detoxification of xenobiotic compounds in plants and seeds, and has been implicated in the detoxification of herbicides. The gene can thus be used to produce herbicide-resistant transgenic plants. The gene and protein can also be used in screening for grant genomes and as signal sequences to direct molecules to the class of plant genomes and as signal sequences to direct molecules to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and considered the section of the activity, arthritis and inflammation, leukaemias and considered the section of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel nucleic acids and polypeptides, useful for such as central nervous system injuries -

```

This invention describes novel cDNA sequences (A) that are highly expressed in normal human pancreatic tissue and which have anticancer and cytostatic activity. (A) are used (1) for recombinant expression of the combinant expression of the cytostatic activity.
